

CloudTask Account Management Guide

Category: Account | Version: 1.0 | Document ID: account_management

1. Creating an Account

Accounts can be created using an email address and password, or via Single Sign-On (SSO) with Google or Microsoft accounts. Business and Enterprise plans additionally support SAML-based SSO.

2. Workspace Ownership

2.1 The account that creates a workspace is automatically assigned the Owner role. There can only be one Owner per workspace at a time.

2.2 Ownership can be transferred to another workspace Admin from Settings > Workspace > Transfer Ownership. The current owner must confirm the transfer via a confirmation email link.

3. Closing an Account

3.1 Users can permanently delete their account from Settings > Account > Delete Account. This action is irreversible after a 7-day grace period.

3.2 During the 7-day grace period, the account is deactivated but recoverable by logging back in.

3.3 Deleting a workspace Owner's account also requires transferring ownership first, or the workspace will be scheduled for deletion.

4. Changing Account Email

Users can change their login email from Settings > Account > Email. A verification link is sent to the new email address, and the change only takes effect after verification.

5. Merging Duplicate Accounts

CloudTask does not support automatic account merging. If a user accidentally created two accounts, they should contact support with both account emails, and the support team will manually migrate workspace data.
