

CloudTask Password & Login Guide

Category: Account | Version: 1.0 | Document ID: password_and_login

1. Resetting Your Password

1.1 Click Forgot Password on the login screen and enter your account email. A password reset link is sent within a few minutes and expires after 30 minutes.

1.2 If the reset email does not arrive, check the spam folder first. If it still does not arrive after 10 minutes, the email address may not be registered, or the account may be using SSO login only.

2. Password Requirements

Passwords must be at least 10 characters long and include at least one uppercase letter, one number, and one special character. Passwords cannot be reused from the last 5 passwords used on the account.

3. Two-Factor Authentication (2FA)

3.1 2FA can be enabled from Settings > Security > Two-Factor Authentication using an authenticator app (TOTP).

3.2 If a user loses access to their 2FA device, they can use one of the 10 backup codes generated when 2FA was first enabled. If backup codes are also lost, account recovery requires identity verification through support.

4. Account Lockout

After 5 consecutive failed login attempts, the account is locked for 15 minutes for security purposes. Users can also unlock immediately by resetting their password.

5. Single Sign-On (SSO) Login Issues

If SSO login fails with an error, this is most commonly caused by the identity provider session expiring. Users should log out of their Google/Microsoft account and log back in, then retry the CloudTask SSO login.
