

CloudTask User & Team Management Guide

Category: Account | Version: 1.0 | Document ID: user_management

1. User Roles

CloudTask supports four roles within a workspace:

- Owner: full control, including billing and workspace deletion
- Admin: can manage members, projects, and integrations, but not billing
- Member: can create and edit tasks within assigned projects
- Viewer: read-only access to assigned projects

2. Inviting Team Members

2.1 Admins and Owners can invite new members from Settings > Members > Invite, by entering an email address and selecting a role.

2.2 Invitations expire after 7 days if not accepted. A new invitation must be sent if the original one expires.

3. Removing Team Members

3.1 Removing a member immediately revokes their access to the workspace, but tasks they created or were assigned to remain intact.

3.2 A removed member's seat is freed for billing purposes at the start of the next billing cycle, as described in the Subscription Policy, Section 5.

4. Changing a Member's Role

Only Owners and Admins can change another member's role. An Admin cannot promote another user to Owner; only the current Owner can transfer ownership (see Account Management Guide, Section 2.2).

5. Guest Access

Guests are external users who can be invited to a single project without joining the full workspace. Guests have Viewer-level permissions by default and do not count toward the workspace's member seat limit.
