

CloudTask Features Guide

Category: Product | Version: 1.0 | Document ID: features_guide

1. Boards

Boards provide a Kanban-style view of tasks organized into columns such as To Do, In Progress, and Done. Tasks can be dragged between columns to update their status.

2. Timeline View

The Timeline view (available on Pro and Business plans) displays tasks on a Gantt-style chart, showing start dates, due dates, and dependencies between tasks.

3. Automations

3.1 Automations let teams set up rules such as 'When a task is moved to Done, notify the assignee's manager.'

3.2 The Free plan includes up to 2 active automations per workspace. Pro includes 20, and Business includes unlimited automations.

4. Reporting & Dashboards

Business plan workspaces have access to advanced reporting dashboards, including team workload charts, burndown charts, and custom report exports.

5. Task Dependencies

Tasks can be marked as blocked by another task. A blocked task cannot be moved to Done until its blocking task is completed, unless this restriction is manually overridden by a Workspace Admin.

6. Recurring Tasks

Tasks can be set to recur daily, weekly, monthly, or on a custom schedule. When a recurring task is completed, the next occurrence is automatically created based on the defined schedule.
