

CloudTask Product FAQ

Category: Product | Version: 1.0 | Document ID: product_faq

Q1: What is CloudTask?

CloudTask is a project and task management platform designed for small to mid-sized teams. It provides boards, lists, and timelines to organize work, along with team collaboration features.

Q2: Can I use CloudTask offline?

CloudTask's mobile apps support limited offline access: you can view previously loaded tasks and create new tasks, which sync automatically once the device reconnects to the internet. The web app requires an active internet connection.

Q3: Is there a limit on the number of tasks per project?

There is no hard limit on the number of tasks per project on any plan. However, very large projects (over 10,000 tasks) may experience slower load times, as noted in the Troubleshooting Guide.

Q4: Can I export my data?

Yes. Workspace data can be exported as CSV or JSON from Settings > Workspace > Export Data. Full exports may take a few minutes to generate for large workspaces and will be emailed as a download link.

Q5: Does CloudTask have a mobile app?

Yes, CloudTask is available on iOS and Android with most core features, including task creation, boards, and notifications. Some advanced reporting features are currently web-only.

Q6: Can I customize task statuses?

Yes, on Pro and Business plans, workspace Admins can create custom task statuses beyond the defaults (To Do, In Progress, Done). The Free plan only supports the three default statuses.
