

CloudTask Troubleshooting Guide

Category: Technical | Version: 1.0 | Document ID: troubleshooting_guide

1. App Not Loading / Blank Screen

- 1.1 Clear your browser cache and cookies for clouddtask.com, then reload the page.
- 1.2 Disable browser extensions (especially ad blockers), as they can interfere with CloudTask's real-time sync scripts.
- 1.3 If the issue persists, try an incognito/private browsing window to rule out cached data conflicts.

2. Tasks Not Syncing Across Devices

- 2.1 CloudTask syncs changes in real time when an internet connection is available. A sync delay of more than 60 seconds usually indicates a connectivity issue on the client device.
- 2.2 Check the sync status icon in the top-right corner of the app. A yellow icon means changes are queued locally and will sync once connectivity is restored.
- 2.3 If the icon shows red (sync failed) for more than 5 minutes, log out and log back in to force a full resynchronization.

3. Notifications Not Received

- 3.1 Check Settings > Notifications to confirm the relevant notification types (task assigned, due date reminders, mentions) are enabled.
- 3.2 For email notifications, check spam folders and confirm notifications@clouddtask.com is not blocked.
- 3.3 For mobile push notifications, ensure notification permissions are granted to the CloudTask app in the device's system settings.

4. Slow Performance in Large Workspaces

Workspaces with more than 5,000 active tasks may experience slower load times on the board view. Archiving completed projects and using filters can significantly improve performance.

5. File Upload Failures

- 5.1 The maximum file size is 5 MB on the Free plan, 100 MB on Pro, and 1 GB on Business.
- 5.2 Uploads may fail on unstable connections; CloudTask does not currently support resumable uploads, so a failed upload must be restarted from the beginning.
